

SafeSight-LAISA — Client Pitch Deck Notes

INTERNAL USE ONLY — STUDEX GROUP Meeting: Client pitch — SafeSight x LAISA **Date:** Week of May 12, 2026 (target: Tuesday May 13) **Presenter:** Tumelo Ramaphosa (CEO)
Support: Victor Ndlovu (Partner Director) **Status:** DRAFT — For Tumi's review before Monday dry run

Opening Line

"We're StudEx Group, and we transform practices like yours."

Then immediately transition to what you observed walking through their reception:

"I walked through your reception five minutes ago, and I saw something I see in every practice we work with — incredible patient care happening alongside manual processes that slow your team down. What if those processes ran themselves?"

Tone: Confident, not arrogant. You are equals talking business. You respect what they built. You are here to make it better.

Do NOT say: "We're an AI company" or "We do digital transformation." Those are buzzwords that trigger defence. Say what you DO: "We transform practices like yours."

Key Slides & Talking Points

SLIDE 1: WHO WE ARE (30 SECONDS)

What to say:

"StudEx Group builds and operates intelligent systems for specialist practices. We don't hand you a manual and leave. We deploy, operate, and optimise — alongside your team, every day."

Key points to land:

- We build what we run (not consultants — operators)
- We specialise in medical practices (not generic tech)
- Our systems run 24/7 (AI agents, not just software)

Do NOT mention: Our 16 agents by name. The client does not need to know about DenchClaw, ClawX, or the RALF loop. To them, it is “our AI operations team.” If they ask how it works, keep it high-level: “We have AI systems that handle the execution and monitoring around the clock.”

SLIDE 2: WHAT WE SEE (60 SECONDS)

What to say:

“Here’s what we see when we look at a practice like yours — and we’ve seen this pattern before, which is why we know exactly how to fix it.”

Walk through their pain points. Use THEIR language, not ours:

What They Say	What We Show	The Number
“Everything is manual”	6.5+ admin hours/day on tasks that should run themselves	R35,750/month in wasted labour
“Patients don’t show up”	No automated reminders, no rebooking system	R45,000/month in lost revenue
“Marketing takes all our time”	No content engine, no scheduling, no strategy	4+ hours/day, ad hoc posts
“Our systems don’t talk to each other”	Elixir Live, My Appointment, Sage — all siloed	Triple data entry, errors, no visibility
“We have no CRM”	Zero patient analytics, no lifecycle tracking	No way to grow strategically

The punchline:

“All of this adds up to over R88,000 per month. That is more than R1,000,000 per year walking out the door — not because your team isn’t working hard, but because your systems aren’t working for you.”

Let the number land. Pause. Let them process.

SLIDE 3: THE 3-PHASE TRANSFORMATION (90 SECONDS)

What to say:

“We don’t do big-bang disruption. We roll out in three phases, each one building on the last. By Phase 1, you feel the difference. By Phase 3, you’re the most technologically advanced multidisciplinary clinic in South Africa.”

Phase 1 — Digital Foundation (Weeks 1-8):

“First, we stop the bleeding. Digital records. Automated booking. Reminders that cut no-shows. Your patients get a modern experience from Day 1.”

Deliverables to mention:

- Patient Management System (replaces paper + Google Drive)
- WhatsApp AI Booking Bot (80% of enquiries handled automatically)
- Automated Reminders (24h WhatsApp + 2h SMS — cuts no-shows by 60-80%)
- Digital Intake Forms (QR code + tablet — eliminates paper)
- System Integration Layer (Elixir Live, My Appointment, Sage all connected)

Phase 2 — Smart Operations (Weeks 5-14):

“Then we automate your workflows. Content creation. Billing coordination. Medical aid verification. Follow-up sequences. Your staff stops doing admin and starts focusing on patients.”

Phase 3 — Intelligent Practice (Weeks 10-24):

“Finally, we make your practice intelligent. AI chatbot that handles patient queries 24/7. Real-time dashboards showing revenue per doctor, per procedure, per day. Doctor support tools that cut prep time in half. Predictive scheduling that knows which patients might not show up before you do.”

Do NOT go deep into technical details. If they ask “how does the chatbot work?” say: “It’s trained on your practice data — your procedures, your FAQs, your scheduling. It learns your practice, not the other way around.”

SLIDE 4: THE NUMBERS (60 SECONDS)

What to say:

“Let me show you what this looks like in rand terms.”

Investment	Amount
Phase 1 — Digital Foundation	R35,000
Phase 2 — Smart Operations	R30,000
Phase 3 — Intelligent Practice	R30,000
Monthly hosting & support	R5,000/month
Total project investment	R95,000

Then:

“Your current monthly loss is R88,000. Phase 1 alone costs R35,000 — a one-time investment that pays for itself in less than two weeks of recovered revenue. And the monthly hosting of R5,000 is a fraction of what you’re losing every month right now.”

Break-even: Month 2. **Annual net return:** R798,000.

Critical: NEVER reveal our actual costs or margins. The client-facing numbers are R35K / R30K / R30K. Our internal costs are R8,300 / R15,500 / R20,000. The difference is our margin. If asked “why does Phase 1 cost R35K?” the answer is: “That includes system design, development, deployment, training, and 8 weeks of operational support. We build and run it — you don’t lift a finger.”

SLIDE 5: LIVE DEMO (3-5 MINUTES)

This is the moment that closes deals.

WhatsApp Bot Demo:

- Show a phone screen with the WhatsApp bot responding
- Walk through: “I want to book an appointment” -> bot presents available slots -> confirms booking -> sends reminder
- Show how a patient reschedules: “I need to change my appointment” -> bot handles it
- Show how complex queries get escalated: reception gets a notification, not an abandoned patient

Dashboard Mockup:

- Show the revenue dashboard: today’s appointments, revenue this week, no-show rate

- Show the patient flow view: new patients, follow-ups, upcoming procedures
- Keep it brief — this is a taste, not a full product demo

What to say during demo:

“This isn’t a mockup of what could work. This is a working prototype we built this week, trained on a practice like yours. Imagine this running in your clinic, with your patients, your procedures, your brand.”

SLIDE 6: WHY STUDEX GROUP (30 SECONDS)

“Three reasons. First, we build what we run — we’re not consultants who hand you a manual and leave. We deploy, operate, and optimise alongside your team. Second, we roll out gradually — no big-bang disruption, your team adapts comfortably. Third, our AI assists your people — it doesn’t replace them. Your doctors focus on patients. Our systems handle everything else.”

The line that lands:

“Think of us as an operations team that never sleeps.”

SLIDE 7: NEXT STEPS (30 SECONDS)

“The first step is a discovery session — we walk your practice, meet your team, map your workflows. That takes half a day. From there, we design your specific architecture and present it for your approval. No commitment beyond that first step.”

The close:

“We don’t need you to commit to all three phases today. We need you to commit to the discovery session. One morning. No cost. No obligation. Let us show you exactly what your practice could look like.”

Objections & How to Handle Them

OBJECTION 1: “THIS IS TOO EXPENSIVE”

The client says: “R35,000 for Phase 1 is a lot of money for us.”

Your response:

"I understand the concern. Let me put it in context. You're currently losing R88,000 every month — that's R1 million a year — in admin waste, no-shows, and missed revenue. Phase 1 costs R35,000 once and pays for itself in under two weeks. The real question isn't whether you can afford this — it's whether you can afford not to do it. Every month you wait costs you R88,000."

Internal note: Our actual Phase 1 cost is R8,300 in infrastructure. Client pays R25,000 in setup (internal figure; client-facing is R35K inclusive). We have margin to offer a 10% discount (R31,500) if needed to close. DO NOT offer discount unless they push hard twice.

OBJECTION 2: "WILL THIS DISRUPT OUR PRACTICE?"

The client says: "We can't afford downtime. Patients come first."

Your response:

"That's exactly why we phase the rollout. Phase 1 runs alongside your current systems — there is no cutover day, no downtime. Your paper records and phone bookings keep working while we build the digital layer. We go live only when your team is trained and comfortable. If anything doesn't work, we roll it back — each phase is independent."

Internal note: We use parallel-run approach. Paper records continue for 2 weeks after digital goes live. The rollback plan is built into every phase. If pushed, we can offer a written rollback guarantee.

OBJECTION 3: "WHAT ABOUT POPIA AND PATIENT DATA?"

The client says: "We deal with sensitive medical data. How do you ensure compliance?"

Your response:

"This is our top priority — not an afterthought. Our system is built privacy-by-design: all patient data is encrypted at rest with AES-256 and in transit with TLS 1.3. Consent management is built into the patient journey. Data subject access requests are handled within 30 days. We have a dedicated compliance officer who audits the system regularly. POPIA compliance isn't something we add — it's something we build in from day one."

Internal note: CSO agent runs regular POPIA audits. We have a compliance checklist ready. If they want to see it, we can share the checklist structure (not the full internal doc). Key selling point: their current paper records are a BIGGER POPIA risk than digital records with encryption and access controls.

OBJECTION 4: “OUR STAFF WON’T USE THIS”

The client says: “My reception team struggles with technology. They won’t adopt this.”

Your response:

”We hear that a lot, and it’s a valid concern. Here’s what we do differently: we train before we deploy. Every person on your team gets hands-on training before any system goes live. And the systems are designed to make their jobs easier, not harder — the WhatsApp bot handles the routine enquiries so your reception team can focus on the patients who need them. We’ve found that within two weeks, staff become advocates — because the system takes away the work they hate doing.”

Internal note: Include staff in the discovery session. Let them ask questions. Show the WhatsApp bot to the reception team specifically — once they see it handling routine bookings, they’ll want it. The biggest adoption risk is the doctors, not the admin staff.

OBJECTION 5: “WE’VE BEEN BURNED BEFORE BY TECH COMPANIES”

The client says: “We tried a system before and it didn’t work / the company disappeared.”

Your response:

”I appreciate that, and it’s why we structure things differently. First, we phase everything — you see results before you commit to the next phase. Second, we don’t disappear after deployment — we operate and monitor your systems 24/7 with real-time alerts. Third, you own your data — always. If you ever want to move to another provider, we hand everything over. No lock-in, no hostage-taking.”

Internal note: This is a relationship sell. Victor needs to be warm and steady here. If the client had a bad experience before, acknowledge it directly: “That shouldn’t have happened, and we make sure it can’t happen with us.” Then prove it with structure (phases, ownership, monitoring).

OBJECTION 6: “WE WANT TO START SMALLER”

The client says: “Can we just do the WhatsApp bot first? That’s what we need most.”

Your response:

”We can absolutely start with the piece that gives you the fastest impact. The WhatsApp booking bot with automated reminders is the single biggest ROI lever — it cuts no-shows and frees up your reception team immediately. That said, the bot works best when it’s connected to your patient records and booking system, which is why we include the integration layer. Think of it as: the bot is the car, the integration is the road. You need both to drive anywhere.”

Internal note: If they insist on a stripped-down Phase 1, we can offer a “Phase 1 Lite” at R20K: WhatsApp bot + reminders + basic patient records (no full PMS, no digital forms, no billing integration). Our cost would be ~R4,500. Still healthy margin. But push for full Phase 1 first — the integration layer is where the real value compounds.

Closing

The line:

”The first step is a discovery session — we walk your practice, meet your team, and map your workflows. Half a day. No cost. No obligation. After that, we design your specific architecture and present it for your approval. One step at a time.”

Do NOT push for a Phase 1 signature in the room. Push for the discovery session. The contract comes after discovery, when they’ve seen your team in action and you’ve mapped their specific needs. The discovery session is the close, not the contract.

If they want to sign immediately: Great. Have a simple Phase 1 agreement ready (1-page, not 10 pages). Victor handles the paperwork. Tumi handles the handshake.

If they need time: That’s fine. Set a specific follow-up date before you leave: “When would be a good time for me to check in? Thursday? Friday?” Get a date. No date = no deal.

Leave-Behind

What you hand the client before you walk out:

1. **Printed proposal PDF** — the client-facing proposal from `SafeSight-LAISA-Client/00-SafeSight-LAISA-Proposal.md` (printed on StudEx-branded paper if available, otherwise clean white stock)
2. **Business card** — Tumi's card with direct mobile number and email
3. **Nothing else** — no slides, no technical docs, no scope documents. The proposal PDF has everything they need. Anything more is noise.

What NOT to leave: Internal cost sheets, agent codenames, architecture diagrams, technical specifications. The proposal is the only client-facing document.

Follow-Up Timeline

When	What	Who	Channel	Purpose
Within 2 hours	Thank-you message	Victor	WhatsApp	Warm, references something specific from the meeting
24 hours	If they mentioned a specific concern, send a brief note addressing it	Tumi	WhatsApp	Shows you listened, not scripted
48 hours	Follow-up email with proposal PDF attached	Tumi	Email	Formal, professional, includes PDF
48 hours	Follow-up call — answer any questions, gauge temperature	Tumi	Phone	Push for discovery session date
72 hours	If no response: second follow-up	Tumi	WhatsApp	Light: “Just checking in — any questions?”
96 hours	If still no response: offer free discovery walkthrough	Tumi	Phone	Lower the barrier. “No cost, no obligation.”
1 week	If still no response: final follow-up	Victor	WhatsApp	Casual, warm. Share a relevant article.
2 weeks	If still no response: park it	Tumi	—	Move on. Don't chase. Add to quarterly check-in list.

Key rules:

- Never more than one touchpoint per day

- Alternate between Tumi (business) and Victor (warmth)
- Every touchpoint must add value (answer a question, share something relevant, offer something)
- If they say “we need more time,” set a specific date to reconnect
- If they say “no,” thank them professionally and add to quarterly check-in

Internal Notes — DO NOT DISCUSS WITH CLIENT

PRICING AUTHORITY

Scenario	Action Required
Client accepts R35K Phase 1	Sign immediately. No discount needed.
Client pushes on price once	Acknowledge value. Hold firm.
Client pushes on price twice	Offer 10% discount: R31,500. Requires Tumi approval.
Client wants Phase 1 Lite (bot + reminders only)	Offer at R20K. Requires Tumi + CFO sign-off.
Client wants everything cheaper	Walk away politely. Margin below 40% is not worth the engagement.

MARGIN GUARDRAILS

Phase	Client Price	Our Cost	Margin	Minimum Acceptable Margin
Phase 1	R35,000 (client-facing) / R25,000 (internal setup fee)	R8,300	67% setup	50%
Phase 2	R30,000	R15,500	48%	40%
Phase 3	R30,000	R20,000	33%	30%
Monthly hosting	R8,500 (client-facing) / R5,000 (client-facing)	R3,650/mo	27-57%	25%

Note: The client-facing proposal shows R5,000/month hosting. Our internal model uses R8,500/month for Year 1 (which includes a larger support bundle). Align with the proposal number when speaking to the client.

WHAT TO NEVER SAY IN THE MEETING

- "Our AI agents" (say "our AI systems" or "our operations team")
- Agent codenames: DenchClaw, ClawX, Robusca, etc. (never)
- Our actual infrastructure costs or margins
- "We use Ollama for local models to save costs" (say "we use a tiered model routing system")
- "The RALF loop" (say "our daily monitoring and optimisation cycle")
- Anything about ChromaDB, n8n, Railway, Vercel by name (say "our cloud infrastructure")
- "We can do it cheaper" (unless they push twice — see pricing authority table)

WHAT TO ALWAYS SAY IN THE MEETING

- "We build what we run"
- "Gradual, not disruptive"
- "AI that works for you, not instead of you"
- "Phased rollout — you see results before committing to the next phase"
- "Training before go-live"
- "24/7 monitoring"
- "You own your data — always"

Post-Meeting Checklist

After the pitch, Tumi fills this out immediately:

- ☐ Overall temperature: Hot / Warm / Cool / Cold
- ☐ Who was most engaged: _____
- ☐ Who was most sceptical: _____
- ☐ What objection landed hardest: _____
- ☐ What got the best reaction: _____
- ☐ Did they commit to discovery session: Yes / No / Maybe
- ☐ Did they ask about pricing: Yes / No

- ☐ Did they ask about competitors: Yes / No
- ☐ Expected timeline to decision: _____
- ☐ Next step: _____

Client Pitch Deck Notes v1.0 — 2026-05-12 — STUDEX Group Internal — CONFIDENTIAL
